Biodiversity studies

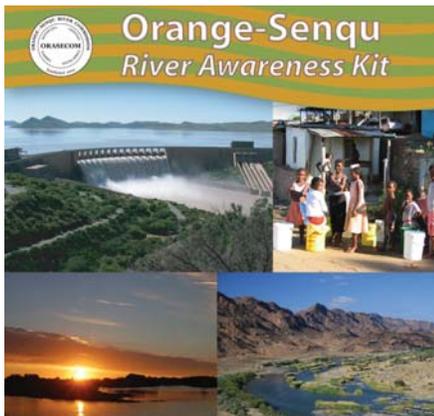

GIS and remote sensing

WWW.HATFIELDGROUP.COM

Drawing on 40 years of experience in over 40 countries, we provide a broad range of environmental services in international development. Our expertise includes capacity-building, biological resource development, and environmental management. We rely on a participatory approach and partnerships with local organizations to carry out contextually appropriate work, promote sustainability, and optimize project outcomes.

FEATURED PROJECTS

RIVER AWARENESS KITS

Hatfield has developed River Awareness Kits (RAKs), a pioneering approach to presenting information on aquatic environments and managing capacity-development programs. We have developed RAKs for the Athabasca River basin, Lower Mekong River basin, the Nile River basin, the Orange-Senqu River basin, the Limpopo River basin and Kunene River basin.

AGENT ORANGE INVESTIGATIONS IN VIETNAM

Hatfield works closely with Vietnamese health authorities to monitor dioxin levels in the environment in Vietnam resulting from the spraying of herbicides (primarily Agent Orange). As a result of this partnership, mitigation and remediation strategies were developed to protect local populations from exposure to dioxin. Our work in this area has been recognized by the international community as the most comprehensive investigation of dioxin exposure in Vietnam.

CAPACITY BUILDING FOR DECENTRALIZED NATURAL RESOURCES MANAGEMENT

Hatfield provided extensive technical assistance in support of the Government of Indonesia's efforts to decentralize the country's environmental and natural resources management authority. We evaluated the impact of decentralization on the provincial and district planning agencies' capacity to manage natural resources as well as land and marine environments. We also assisted the Government in initiating a capacity-building program for the planning agencies, particularly at the district level.
